

U D 000 **MODELS**

Programmer/Controllers Product data

(01943) 602001

@ sales@issltd.co.uk

Features

- Heating and cooling with two modular outputs
- Motorised Valve output
- Customised operation
- Heater current display
- Load diagnostics
- Up to three alarm relays
- 10amp output (2204e only)
- Self-tuning with overshoot inhibition
- Optomised fan, water and oil cooling
- Setpoint rate limit with timer function
- Digital communications
- Plug-in from front
- IP65 panel sealing
- Compliant with European EMC and low voltage safety directives
- 3 Year warranty

The 2204e/2208e is a versatile, high stability temperature or process controller, with self tuning, in 1/4 DIN and 1/8 DIN sizes. It has a modular hardware construction with the option of two control outputs, two alarm relays and a communications module. Two Digital inputs are included as standard. The hardware is configurable for heating, cooling or alarms. The 2204e/2208e is fully configurable on-site.

Precise control

An advanced PID control algorithm gives stable 'Straight-line' control of the process. A one-shot tuner is provided to set up the initial PID values and to calculate the overshoot inhibition parameters. On electrically heated loads, power feedback is used to stabilise the output power and hence the controlled temperature against supply voltage fluctuations. Dedicated cooling algorithms ensure optimum control of fan, water and oil cooled systems.

Universal input

A universal input circuit with an advanced analogue to digital convertor samples the input at 9Hz and continuously corrects it for drift. This gives high stability and rapid response to process changes. High noise immunity is achieved by rejection of 50/60Hz pick-up and other sources of noise. Sensor diagnostics are also provided. The input will accept all standard thermocouples, the Pt100 resistance thermometer and linear millivolts, milliamps or DC volts.

Input filtering from OFF to 999.9 seconds is included.

Customised operation

A custom LED display provides a bright, clear display of the process value and setpoint. Tactile push buttons ensure positive operation. Access to other parameters is simple and easy to understand and can be customised to present only those parameters that need to be viewed or adjusted. All other parameters are locked away under password protection.

Alarms

Up to four process alarms can be combined onto a single output. They can be full scale high or low, deviation from setpoint, rate of change or load failure alarms. Alarm messages are flashed on the main display. Alarms can be configured as latching or non-latching and also as 'blocking' type alarms which means that they will become active only after they have first entered a safe state.

Digital communications

Available with either EIA485 2 wire, EIA422 4 wire or EIA232. With industry-standard protocols including: Modbus®, Eurotherm Bisync, DeviceNet®.

PDSIO Load diagnostic

PDSIO Load diagnostics

PDSIO (Pulse Density Signalling I/O) is a major innovation in the 2204e/2208e. When used in combination with a Eurotherm TE10 solid state relay (SSR), it allows the logic output of a 2204e/2208e to transmit the power demand signal and simultaneously read back load fault alarms. These alarms will be flashed as messages on the controller front panel.

Two alarm conditions will be detected, either SSR failure indicating an open or short circuit condition in the SSR and heater circuit failure indicating either fuse failure, heater open circuit or line supply absent.

PDSIO mode 2 will monitor load current and display value, giving an alarm if current is out of limits.

PDSIO Setpoint transmission

PDSIO setpoint input

PDSIO can be used to digitally transmit the setpoint profile from a 2404/08 to a number of slave Series 2200e or 2400 controllers. If any slave zone departs from the required setpoint by more than a pre-settable amount, a signal from any slave can be transmitted back to the master causing the program to freeze until the error is corrected. Digital accuracy is preserved using PDSIO.

Technical specification

Inputs				
General	Range	-10mV to 80mV and 0 to 10Vdc (auto ranging)		
	Sample rate	9Hz (110mS)		
	Calibration accuracy	0.25% of reading, $\pm 1^{\circ}$ C or ± 1 LSD or whichever is the greater		
	Resolution	$<1\mu V$ for \pm 100mV range, $<0.2mV$ for 10Vdc range		
	Linearisation accuracy	<0.1% of reading		
	Input filter	OFF to 999.9secs		
	Zero offset	User adjustable over the full display range		
Thermocouple	Types	See sensor inputs table (ordering information)		
	Cold junction compensation	Automatic compensation typically >30 to 1 rejection of ambient temperature		
		change		
		External references 0, 45 and 50°C		
RTD/PT100	Туре	3-wire, Pt100 DIN43760		
	Bulb current	0.2mA		
	Lead compensation	No error for up to 22 ohms in all 3 leads		
Process	Range	-10 to 80mV, 0 to 20mA or 0 to 10Vdc (All configurable between limits)		
	Туре	Linear		
	Application	Process value		
Digital	Туре	Contact closure		
	Application	Manual select, 2nd setpoint, remote setpoint select, internal hold,		
		acknowledge alarms, lock keypad, reset, load current, standby		
Outputs				
Relay	Rating: 2-pin relay	Min: 12V, 100mA dc. Max: 2A, 264Vac resistive		
Relay	Rating: 2-pin relay Rating: change-over, alarm relays	Min: 12V, 100mA dc. Max: 2A, 264Vac resistive Min: 6V, 1mA dc. Max: 2A, 264Vac resistive		
Relay	81 3			
-	Rating: change-over, alarm relays	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive		
Relay	Rating: change-over, alarm relays Application	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive Heating, cooling or alarms		
-	Rating: change-over, alarm relays Application Rating	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive Heating, cooling or alarms 18Vdc at 24mA (non-isolated)		
-	Rating: change-over, alarm relays Application Rating	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive Heating, cooling or alarms 18Vdc at 24mA (non-isolated) Heating, cooling or alarms		
	Rating: change-over, alarm relays Application Rating	Min: 6V, 1mA dc. Max: 2A, 264Vac resistive Heating, cooling or alarms 18Vdc at 24mA (non-isolated) Heating, cooling or alarms PDSIO mode 1: Logic heating with load failure alarm		
-	Rating: change-over, alarm relays Application Rating	Min: 6V, 1mA dc. Max: 2A, 264Vac resistiveHeating, cooling or alarms18Vdc at 24mA (non-isolated)Heating, cooling or alarmsPDSIO mode 1: Logic heating with load failure alarmPDSIO mode 2: Logic heating with load/SSR failure alarm and load currentdisplay		
-	Rating: change-over, alarm relays Application Rating	Min: 6V, 1mA dc. Control functions

Control	Modes	PID or PI with overshoot inhibition, PD, P only or On/Off		
	Application	Heating and cooling or process output		
	Auto/manual	Bumpless transfer		
	Setpoint rate limit	OFF to 999.9 degrees or display units per minute		
	Cooling algorithms	Linear; Water (non-linear); Fan (minimum on time), Oil (Proportional only)		
Tuning	One-shot tune	Automatic calculation of PID and overshoot inhibition parameters		
	Automatic droop compensation	Automatic calculation of manual reset value when using PD control		
Alarms	Types	Full scale high or low. Deviation high, low, or band. High current, low current		
	Modes	Latching or non-latching. Normal or blocking action		
		Up to four process alarms can be combined onto a single output		

General

Display	Dual, 4 digit x 7 segment high intensity LED		
Dimensions & weight	2204e - 96W x 96H x 103D mm. 600g		
	2208e - 48W x 96H x 103D mm. 400g		
Supply	85 to 264Vac -15%, +10%. 48 to 62Hz. 10watts max		
Temperature and RH	Operating: 0 to 55°C, RH: 5 to 90% non-condensing. Storage: -10 to 70°C		
Panel sealing	IP65		
Electromagnetic	Meets generic emissions standard EN50081-2 for industrial environments		
compatibility	Meets general immunity requirements of EN50082-2(95) for industrial		
	environments		
Safety standards	EN61010, installation category 2. (voltage transients must not exceed 2.5kV)		
Atmospheres	Electrically conductive pollution must be excluded from the cabinet in which this		
	controller is mounted. This product is not suitable for use above 2000m or in		
	corrosive or explosive atmospheres without further protection.		

Dimensional details

Ordering information

Hardware coding

-4 1-5V -5 0-10V current and open and short circuit alarms.

(01943) 602001

Configuration coding (optional)

Note 3. Setpoint limits: include the decimal position required in the displayed value. Up to one for temperature inputs, up to two for process inputs.

Note 4. An external 1% current sense resistor is supplied as standard. If greater accuracy is required, a 0.1% 2.49Ω can be ordered as part no. SUB2K/249R.1.

Example ordering code:

2208e - CC - VH - LH - TC - FL - FH - 2YM - ENG - K - 0 - 1000 - C - XX - XX - XX - XX - XX 2208e, Controller, 85 to 264Vac, Logic heating, Triac cooling, Low alarm relay, High alarm relay, EIA485, Modbus comms, English manual, type K thermocouple, 0 to1000°C, Digital input 1 no function, Digital input 2 no function, reverse acting, power feedback enabled, linear cooling
